

Random Products for Magento 2

Product Overview & Feature Guide

What is Random Products?

Random Products is a Magento 2 extension that displays a **floating product discovery widget** on your storefront. It shows randomly selected products from your catalog in a sleek, draggable window that customers can interact with, minimize, or close.

The widget encourages customers to explore products they might not otherwise find, increasing engagement, time on site, and average order value.

Key Features

Feature	Description
Floating Discovery Window	A compact, elegant product display that floats on any page. Shows one product at a time with image and title.
Draggable & Movable	Customers can grab the title bar and drag the window anywhere on screen. Position is remembered.
Auto-Rotation	Automatically cycles through random products at a configurable interval. Pauses on hover so customers can view details.
Shuffle Button	One-click to skip to the next random product instantly.
Add to Cart	AJAX-powered add to cart directly from the widget. Updates the mini-cart without page reload and no JavaScript required.
Minimize & Close	Customers can minimize to a small "Discover" pill, or close entirely. Minimized state is remembered.
Only In-Stock Products	Never shows out-of-stock or disabled products. Only visible, enabled, saleable items appear in the selection.
Minimum Price Filter	Set a price floor to exclude free samples, placeholders, or low-value items.

Advanced Product Filtering

Full control over which products appear in the random selection:

Filter	Type	Description
Include SKUs	Textarea	Only show specific products by SKU
Include Categories	Multi-select	Only show products from selected categories
Exclude SKUs	Textarea	Never show specific products

Exclude Categories	Multi-select	Never show products from specific categories
Minimum Price	Number	Exclude products below a price threshold

Priority: Include filters narrow the pool first. Exclude filters then remove from what remains. Minimum price applies on top of both.

Theme-Matching Styling

Customize the widget appearance to match your store design directly from the admin panel:

Title Bar Gradient - Set start and end colors for the title bar gradient with hex color inputs and preset swatch palettes.

Title Bar Text Color - Control the text and icon color in the title bar.

Accent Color - Used for the Add to Cart button, link hover states, and the minimized pill.

Corner Radius - From sharp (0px) to rounded (12px default) to pill-shaped (20px+).

CMS Widget Support

In addition to appearing automatically via layout XML, the widget can be placed anywhere using a CMS widget directive:

```
{ {widget type="QKits\RandomProducts\Block\Widget\RandomProducts" } }
```

Widget parameters (title, product_count, show_add_to_cart) can override the global config.

Compatibility

	Supported
Magento Version	2.4.6, 2.4.7, 2.4.8+
PHP Version	8.1, 8.2, 8.3
Multi-Store	Yes - per store view configuration
Multi-Currency	Yes - displays store currency
Mobile / Responsive	Yes - touch-friendly, responsive layout
Themes	Compatible with Luma, Hyvae, and custom themes

Licensing

Random Products requires a valid license key for operation. Each license covers **one Magento installation** (production domain). Development and staging environments are included at no additional cost.

License keys are delivered automatically after purchase and can be managed in your account at modules.qkits.com.

License format: **QK-RP-XXXX-XXXX-XXXX**
